

ABSTRACT

The invention relates to a method of transferring a multimedia message in a multimedia messaging system, which comprises a terminal (MS) and a multimedia messaging centre (MMSC), which are arranged to communicate with each other at least partially wirelessly. The multimedia messaging centre (MMSC) is arranged to receive multimedia messages addressed to the terminal (MS) and transmit a notification message to the terminal (MS) to inform it of a multimedia message addressed to the terminal (MS) which has arrived at the multimedia messaging centre (MMSC). The method comprises transmitting a first message (11) wirelessly from the terminal (MS) to the multimedia messaging centre (MMSC), the first message (11) requesting the multimedia messaging centre (MMSC) to transmit a notification message (12) to the terminal (MS) on the multimedia messages addressed to the terminal (MS) which have arrived at the multimedia messaging centre and on which the terminal (MS) has not received a notification message yet. The invention also relates to a system for transmitting a multimedia message, and to a terminal and a multimedia messaging centre.
